

**DEDICATED SERVER MANAGEMENT CARD
WITH HOT SWAP FUNCTIONALITY**

Abstract of the Disclosure

5 A server system includes a plurality of printed circuit assemblies including at least
one host processor card. A management card is coupled to the plurality of printed circuit
assemblies. The management card is dedicated to monitoring and managing operation of
the server system, including monitoring and managing on-line insertion and removal of
the printed circuit assemblies in a compact peripheral component interconnect (cPCI)
10 server system.
